EDUCATION

Bachelor of Computer Science (co-op) 2022 - 2026
Concordia University, Montreal, QC

Academic exchange - Finance Concentration 2025 - 2026
Kyung Hee University, Seoul, South Korea
Recipient of multiple scholarships, including the Global Korea Scholarship

WORK EXPERIENCE

Backend Software Development Intern @ Autodesk Jan 2026 - May 2026

- Built concurrent **Java** services using virtual threads and gRPC to run synthetic health checks against a petabyte-scale distributed NoSQL platform, validating indexing correctness and data availability
- Designed high-throughput validation and monitoring pipelines to benchmark indexing latency, verify record propagation, and trigger alerts, using IaC for consistent deployment across multiple production regions
- Refactored and optimized existing AWS Lambda services and deployed new serverless workflows, reducing average execution time from 60+ seconds to ~15 seconds
- Improved observability and system performance by reducing cross-regional latency by 170ms, decreasing test flakiness, and enabling low-friction rollout to new regions

Software Development Engineer Intern @ Amazon May 2025 - Aug 2025

- Designed and implemented a scalable backend powering advanced search filters for a training platform serving 1M+ users and indexing over 100M records
- Architected parent-child indexing in **OpenSearch** and refactored ingestion pipelines (AWS Lambda) to support new data models and session metadata with high consistency
- Integrated **GraphQL** APIs with distributed services to enable faceted search, reducing query latency at scale
- Delivered a robust, low-latency search solution adopted by multiple internal organizations across Amazon

Backend Developer Intern @ Flexspring Sep 2024 - Dec 2024

- Tackled production bugs and implemented features in **Java**-based microservices
- Optimized query efficiency by moving filtering logic to the backend, eliminating ~20,000 unnecessary queries per day, significantly improving page load times, and reducing strain on DB services
- Refactored a large portion of HTTP request handling and legacy code, streamlining API interactions, reducing redundant calls, and improving maintainability and performance

Software Developer Intern @ Federal Highway Police May 2023 - Aug 2023

- Built data aggregation tools with **Python** and **PostgreSQL** that were used on a federal scale, increasing case submissions by over 10% and automated workflows reducing the time spent on routine tasks by over 50%

PROJECTS & OTHER EXPERIENCE

Personal project 2025

- Designed and implemented the backend of a learning platform, with **Golang** APIs for video streaming, content metadata storage, user authentication, and progress tracking. Self-hosted it leveraging **NGINX** as a reverse proxy and containerized services with **Docker**

Math tutor @ Concordia University 2023/2024

- Worked in the university's math department, leading classes and organizing exam review sessions

SKILLS

Programming Languages | Java • Python • JavaScript/TypeScript • Go • Bash

Infrastructure & DevOps | AWS (Lambda, EC2, AppSync, API Gateway) • Docker • NGINX • Google Cloud

Databases | OpenSearch • PostgreSQL • MongoDB • DynamoDB

Technologies | Git • GraphQL • Jenkins • Linux/Unix
